

AI as Applied in Today's Judicial Landscape

This session explores how the use of artificial intelligence is being explored and used by judges in processing their dockets, preparing their cases, and issue their written decisions. Providing their expertise in this area from Thomson Reuters are Kaitlyn Frank, Senior Product Marketing and Madeline Bowie, Director, Product Marketing. The discussion will highlight the type of AI-powered tools that can aid judges in their day-to-day activities. Rounding out the panel is a judge's description of their present and future use of AI tools.

Upon completing this session, attendees will be able to:

1. **Judicial Decision-Making:** Analyze how AI-driven tools, such as case summarization, legal research assistance, and evidence authentication, might improve judicial efficiency and decision-making in cases involving SRLs.
2. **Access to Justice:** Evaluate how AI applications for SRLs, including legal guidance systems, plain-language translation, and interactive coaching, might enhance access to justice and inform judicial strategies for managing such cases.
3. **Court Administration:** Assess the benefits and ethical considerations of implementing AI to support SRLs and improve court operations, with a focus on reducing burdens on judicial and court staff and improving data-driven insights for judicial administration.
