Autonomous & Connected Vehicles: What Judges Need to Know

Autonomous vehicles are on the road, and widespread adoption of this technology may not be far away. Criminal and civil cases involving these vehicles and the data they collect are certain to follow. How will you handle these issues when they appear in your courtroom? Tune in for a discussion with Gail Gottehrer, a litigator whose practice focuses on legal issues arising from emerging technologies, and an expert on autonomous vehicles. This webcast is sponsored by the **State Justice Institute**.

After this presentation, you will be able to:
- Identify the data collected by autonomous vehicles;
- Anticipate how parties may seek to use that data in criminal and civil cases; and
- Analyze the potential liability, data privacy, and Constitutional issues associated with these vehicles.

Faculty
This webcast's faculty will be Ms. Gail Gottehrer, Esq.. Gail's practice focuses on technology-related litigation and counseling, including autonomous vehicle regulation, data privacy, and cybersecurity. She teaches Law for Knowledge Innovation & Practices at Columbia University, is a fellow at the Center for Legal Innovation at Vermont Law School, recently delivered a keynote at XLR8 at London Tech Week, and lectured at Stanford University. Gail was selected as one of the *Profiles in Diversity Journal's* 2017 Women Worth Watching in STEM and one of the Connecticut Technology Council's 2016 Women of Innovation.
